Challenge

Try these strategies for multiplying by 9 to find 15×9 and 21×9 :

Double the number three times and add the original number.

<input type="checkbox"/>	e.g.	6
<input type="checkbox"/>	$6 \times 2 = 12$	$12 \times 2 = 24$
<input type="checkbox"/>	$24 \times 2 = 48$	$48 + 6 = 54$
<input type="checkbox"/>		

Multiply the number by 10 and subtract the original number.

<input type="checkbox"/>	e.g.	6
<input type="checkbox"/>	$6 \times 10 = 60$	
<input type="checkbox"/>	$60 - 6 = 54$	
<input type="checkbox"/>		

Multiply the number by 3, then multiply that product by 3.

<input type="checkbox"/>	e.g.	6
<input type="checkbox"/>	$6 \times 3 = 18$	
<input type="checkbox"/>	$18 \times 3 = 54$	
<input type="checkbox"/>

The 11 and 12 times tables

Sheet 2

Complete these calculations:

1) $11 \times 4 = \square$

2) $10 \times 11 = \square$

3) $\square \div 11 = 2$

4) $12 \times 3 = \square$

5) $5 \times 12 = \square$

6) $12 \times 7 = \square$

7) $\square \div 11 = 9$

8) $\square \times 12 = 48$

9) $66 = 11 \times \square$

10) $12 \times \square = 144$

11) $\square \div 12 = 6$

12) $\square = 11 \times 12$

13) $11 \div \square = 1$

14) $\square = 12 \times 7$

15) $11 \times \square = 132$

16) $\square \times 12 = 108$

17) $\square \div 12 = 8$

18) $\square = 12 \times 12$

Challenge

Look at these strategies for multiplying by 12. Explain why each one works.

Multiply by 3 then double the answer twice.

e.g.	7
	$7 \times 3 = 21$
	$21 \times 2 = 42$ $42 \times 2 = 84$

Multiply the number by 10 and add twice the original number.

e.g.	7
	$7 \times 10 = 70$
	$70 + 14 = 84$

Multiply the number by 4 then multiply that answer by 3.

e.g.	7
	$7 \times 4 = 28$
	$28 + 28 + 28 = 84$

23) $72 \div 9 = 8$ 24) $12 = 108 \div 9$

Challenge

Double the number three times and add the original number.

$15 \times 2 = 30, 30 \times 2 = 60$

$21 \times 2 = 42, 42 \times 2 = 84$

$60 \times 2 = 120, 120 + 15 = 135$

$84 \times 2 = 168, 168 + 21 = 189$

Multiply the number by 10 and subtract the original number.

$15 \times 10 = 150, 150 - 15 = 135$

$21 \times 10 = 210, 210 - 21 = 189$

Multiply the number by 3, then multiply that product by 3.

$15 \times 3 = 45, 45 \times 3 = 135$

$21 \times 3 = 63, 63 \times 3 = 189$

 $7 \times 3 = 21$
 $63 = 7 \times 9$
 $7 = 49 \div 7$
 $7 \div 1 = 7$

Challenge

The pattern moves back by 1 on each row.

If it had 7 columns it would be straight down.

If it had 9 columns it would drop back by 2 on each row.

If it had 6 columns it would move forward by 1 on each row.

Challenge

Look at these strategies for multiplying by 12.

Each of these methods works because you are still finding 12 'lots of' the original number.

Multiply by 3 then double the answer twice.

$\times (3 \times 2 \times 2)$ is the same as $\times 12$

Multiply the number by 10 and add twice the original number.

Here you find 10 'lots of' the original number and 2 'lots of' it, then add them together to make 12 lots altogether.

Multiply the number by 4 then multiply that answer by 3.

$\times (4 \times 3)$ is the same as $\times 12$
